laurac@classiccomputerrecovery.com

Established in 2002, Classic Computer Recovery (DBA: Computer Recovery, Inc.) has quickly become one of the leading computer recycling companies in the Midwest. Classic Computer Recovery offers the highest value for P4 PC's (desktop or towers), all notebooks, black 15" & 17" monitors, high-end working laser printers, scrap in volume of 10,000 lbs and computer parts such as hard drives & memory modules. Classic Computer Recovery will charge the lowest prices compared to our competition.

For computers recycled back into the market, we have a multi-step process to ensure quality for our customers. Every machine is tested for serviceability. All data and/or software on any every drive are deleted. We add missing components and replace any defective component. Then we verify functionality one more time. Finally, each machine is sent to a cleaning station for overall cleaning and removal of any stickers/asset tags. Our recycled computers and components come with a 30-day warranty. *Call today for our disposal rates. References are available upon request.*

CCR performs Department of Defense (DOD) hard drive wipe services for any of our clients requiring data to be wiped from hard drives.

CCR has yearly promotions for Earth Day, April 22-30th and America Recycles Day, Nov 15th-Nov 30th.

We are amongst a few companies who have done extensive research and spoke the loudest about the economic and environmental impact the Analog-to-Digital TV switch COULD HAVE on the recycling industry if the U.S. plays their "hand" correctly.

CCR has earned national media attention for our efforts in trying to get the U.S. to be proactive with the Solid Waste Industry and TV manufacturers specifically on the topic of Analog TVs going in landfills. We feel the FCC-mandated switch to digital is an event that possesses the media power and public awareness momentum that will result in catapulting the E-waste Recycling Industry into the economic and environmental force it should be creating thousands of jobs and in making "RECYCLING" a household word.
